

The compact fluorescent light bulb program is part of Toronto Community Housing's Green Works, an on-going program that promotes a healthy environment and improves the living standards and working conditions. As part of Green Works we've also replaced old fridges, stoves and toilets with new energy efficient models to conserve energy and water.

Thank you for your co-operation. When you participate, Green Works. For more information on the compact fluorescent light bulb program, speak to your building staff or visit www.torontohousing.ca.

Toronto Community Housing

Compact fluorescent light bulbs contain a small amount of mercury that is necessary to produce light. Just like paint, batteries and other household chemicals, compact fluorescent bulbs should be disposed of safely. Speak to your building staff for instructions. These bulbs can not be used with a dimmer or three-way switch.

Toronto Community Housing

The new bulbs are here.

We have switched a number of your regular light bulbs in your home for compact fluorescent light bulbs. We put the old bulbs in the brown paper bag. Bring the bag with the old bulbs in it to your building staff. You can switch it for another **free** compact fluorescent light bulb.

Here's why compact fluorescent bulbs are so much better:

They last up to **5 years:**

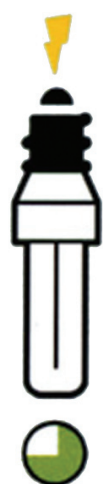

They rarely need replacing so that over time, they are actually cheaper.

Each bulb **saves \$40**

in energy cost - the money saved goes right back into fixing up buildings.

Incandescent
light bulb

Compact Florescent
light bulb (CFL)

You can **save more**
turn off lights that are not in use.

Working together we can reduce energy use that can cause harmful pollution while **improving our health,** the health of our children and our community.
